Shubham Pandey

Portfolio — 8218554651 — contact.shub.aidev@gmail.com — LinkedIn — GitHub

Professional Summary

Aspiring AI/ML Engineer and final-year Computer Science Engineering student focused on building production-ready Agentic AI systems, enterprise RAG applications, and high-performance Computer Vision pipelines to solve complex automation workflows.

Education

Bennett University 2023 – 2027
B.Tech in Computer Science Engineering (Specialization in AI) CGPA: 8.36/10

Shiksha Bharati Senior Secondary School (CBSE) 2022 – 2023
Class XII 84%

Shiksha Bharati Senior Secondary School (CBSE) 2020 – 2021
Class X 91%

Experience

BCG X (Boston Consulting Group) (Forage) Certificate Link – June 2026
GenAI Project

- **Spearheaded** the architecture of a corporate financial chatbot by parsing unstructured **SEC 10-K/10-Q disclosures** using Pandas.
- **Extracted** critical business performance metrics, text-based operational risks, and corporate **KPI analytics** from raw text filings.
- **Designed** context-aware prompt engineering workflows and structural system logic tailored for scalable enterprise AI tools.

JPMorgan Chase & Co. (Forage Job Simulation) Certificate Link – June 2026
Quantitative Research Project

- **Formulated** a custom cubic spline interpolation model in Python to accurately forecast commodity prices across a **12-month future horizon**.
- **Devised** a reusable asset valuation blueprint to dynamically estimate baseline asset value configurations and overall contractual profitability.
- **Automated** core financial risk evaluation pipelines, implementing programmatic borrower segmentation workflows using **FICO buckets**.

Technical Skills

Agentic AI & GenAI Frameworks: LangChain, LangGraph, CrewAI, Groq API, ChromaDB, FAISS
Deep Learning & ML Libraries: PyTorch, TensorFlow, Scikit-Learn, Pandas, NumPy
Programming Languages: Python, C++, JavaScript, TypeScript
Web Frameworks & Deployment: FastAPI, Flask, React, Vite, Tailwind CSS, Streamlit, Uvicorn
Databases & Developer Tools: MongoDB, SQL, Git, GitHub, Docker

Projects

Finvexis AI
GitHub – April 2026

Stack: LangChain, Multi-Agent Systems, Python, FastAPI, Uvicorn, React, TypeScript, Vite

- **Architected** a modular multi-agent system integrating **4 core corporate domains** (Business, Finance, Sales, HR) into a single layer.
- **Isolated** agent logic into dedicated asynchronous microservices in FastAPI to enable highly concurrent workflow execution.
- **Deployed** an executive-facing React dashboard featuring automated tools for strategic financial forecasting, budgeting, and automated **KPI analytics**.

PolyDoc Chat
GitHub – February 2026

Stack: LangChain, ChromaDB, Groq API, Python, FastAPI, React, Tailwind CSS, Framer Motion

- **Engineered** an enterprise document intelligence RAG ecosystem natively supporting **6 formats** (PDF, DOCX, PPTX, CSV, TXT, and Markdown).
- **Optimized** vector lookups using ChromaDB and Llama 3.3 70B to achieve a **0.69s end-to-end latency** and **16.6ms retrieval latency**.
- **Enforced** local embedding generation via miniLM alongside structural mapping to ensure **100% citation-backed responses**.

Co-Drive
GitHub – January 2026

Stack: YOLO11n, Computer Vision, GPU Acceleration, Python, FastAPI, React, Vite, Tailwind CSS

- **Trained** and configured a custom **YOLO11n** object detection pipeline yielding a verified **99.05% mAP** for traffic sign recognition.
- **Built** GPU-accelerated stream execution layers capable of processing image, video, and live webcam feeds with **19–25ms inference latency**.
- **Integrated** high-performance browser-native video outputs via **avc1 encoding** alongside interactive Framer Motion components.

MoodFlix
GitHub – March 2026

Stack: Grok API, Scikit-Learn, NLP, TF-IDF, Cosine Similarity, FastAPI, HTTPX, React, Framer Motion

- **Developed** a semantic discovery engine mapping query intents via **TF-IDF, cosine similarity, and CountVectorizer**.
- **Accelerated** parallel live metadata enrichment pipelines by running asynchronous non-blocking web requests via HTTPX and Asyncio.
- **Embedded** conversational context tracking using the Grok API, featuring typo-handling routines via **difflib fuzzy matching**.

My Portfolio
Live — GitHub – June 2026

Stack: Git, GitHub, React, Vite, TypeScript, Tailwind CSS, Framer Motion, Lucide React

- **Synthesized** a production-ready personal hub that serves as a live interactive deployment tracking system for all modular code bases and dynamic logs.

Achievements

- **Selected** as an AI/ML Developer to participate in the national-level Smart India Hackathon (SIH) finals for building smart utility tools.
- **Mentored** academic student groups on deployment workflows, RAG pipeline construction, and stable AI application frameworks.

Certifications

Apply Generative Adversarial Networks (GANs) — DeepLearning.AI	Certificate Link
Build Basic Generative Adversarial Networks (GANs) — DeepLearning.AI	Certificate Link
Neural Networks and Deep Learning — DeepLearning.AI	Certificate Link
Machine Learning: Classification — University of Washington	Certificate Link
Statistics for Data Science with Python — IBM	Certificate Link
