Professional Summary

Aspiring AI/ML Engineer and final-year Computer Science Engineering student with experience in Agentic AI, Generative AI, Retrieval-Augmented Generation (RAG), Computer Vision, Deep Learning, and Machine Learning, focused on building intelligent and scalable AI-powered applications.

Education

Bennett University	2023 – 2027
B.Tech in Computer Science Engineering	CGPA: 8.0/10
Shiksha Bharati Senior Secondary School (CBSE)	2022 – 2023
Class XII	84%
Shiksha Bharati Senior Secondary School (CBSE)	2020 – 2021
Class X	91%

Experience

BCG X (Boston Consulting Group) (Forage Job Simulation)	June 2026
GenAI Project	Certificate Link Here
– Developed a scalable corporate financial chatbot for BCG's consulting division. – Processed unstructured SEC 10-K/10-Q disclosures using Python and Pandas. – Extracted business performance metrics, text-based financial risks, and corporate KPIs. – Designed context-aware prompt engineering workflows and logic for enterprise AI.	
JPMorgan Chase & Co. (Forage Job Simulation)	June 2026
Quantitative Research Project	Certificate Link Here
– Conducted time-series and exploratory data analysis on natural gas prices via Python. – Engineered a custom cubic spline interpolation model to forecast 12-month future prices. – Developed a reusable valuation framework to estimate asset values and contract profitability. – Automated credit risk assessment pipelines and borrower segmentation using FICO buckets.	

Technical Skills

Agentic AI & GenAI Frameworks: LangChain, LangGraph, CrewAI, Groq API, ChromaDB, FAISS
Deep Learning & ML Libraries: PyTorch, TensorFlow, Scikit-Learn, Pandas, NumPy
Programming Languages: Python, C++, JavaScript, TypeScript
Web Frameworks & Deployment: FastAPI, Flask, React, Vite, Tailwind CSS, Streamlit, Uvicorn
Databases & Developer Tools: MongoDB, SQL, Git, GitHub, Docker

Projects

Finvexis AI	April 2026
<i>Stack: LangChain, Multi-Agent Systems, Python, FastAPI, Uvicorn, React, TypeScript, Vite</i>	GitHub
– Built a full-stack enterprise intelligence platform integrating 4 core domains (Business, Finance, Sales, and HR) into a unified layer. – Designed modular, domain-isolated orchestration modules in FastAPI enabling scalable, independent automated workflow execution.	

- Engineered an executive-facing React dashboard featuring responsive tools for strategic business forecasting, budgeting, and **KPI analytics**.

PolyDoc Chat

February 2026

Stack: LangChain, ChromaDB, Groq API, Python, FastAPI, React, Tailwind CSS, Framer Motion

[GitHub](#)

- Developed an enterprise document intelligence RAG ecosystem supporting **PDF, DOCX, PPTX, CSV, TXT, and Markdown** parsing.
- Optimized pipeline using ChromaDB vector search and Llama 3.3 70B to achieve **0.69s end-to-end latency** and **16.6ms retrieval latency**.
- Implemented local embedding generation via **miniLM** and engineered **100% citation-backed responses** to eliminate hallucinations.

Co-Drive

January 2026

Stack: YOLO11n, Computer Vision, GPU Acceleration, Python, FastAPI, React, Vite, Tailwind CSS

[GitHub](#)

- Trained and custom-deployed a **YOLO11n** object detection model achieving a verified **99.05% mAP** for real-time traffic sign recognition.
- Built GPU-accelerated infrastructure supporting image, video, and live webcam stream pipelines with **19–25ms inference latency**.
- Implemented browser-compatible video streams using **avc1 encoding** alongside an animated dashboard utilizing Framer Motion.

MoodFlix

March 2026

Stack: Grok API, Scikit-Learn, NLP, TF-IDF, Cosine Similarity, FastAPI, HTTPX, React, Framer Motion

[GitHub](#)

- Developed an intent-driven movie discovery system using **TF-IDF, cosine similarity, and CountVectorizer** for semantic matching.
- Reduced live metadata enrichment latency by **70% through asynchronous parallel requests** using HTTPX and Asyncio frameworks.
- Integrated Grok LLM for conversational chat tracking, incorporated typo-handling via **difflib fuzzy matching**, and built local watchlists.

My Portfolio

June 2026

Stack: Git, GitHub, FastAPI, React, Vercel

[GitHub](#)

- Engineered a production-ready personal hub that acts as a comprehensive live interactive deployment of all compressed projects, frameworks, and metrics listed across this resume.

Achievements

- Participated in Smart India Hackathon (SIH) as an AI/ML Developer, contributing to AI-driven solution development.
- Mentored peers in AI/ML, RAG architectures, LLM workflows, and project development.

Certifications

Apply Generative Adversarial Networks (GANs) — DeepLearning.AI	Certificate Link Here
Build Basic Generative Adversarial Networks (GANs) — DeepLearning.AI	Certificate Link Here
Neural Networks and Deep Learning — DeepLearning.AI	Certificate Link Here
Machine Learning: Classification — University of Washington	Certificate Link Here
Statistics for Data Science with Python — IBM	Certificate Link Here
